

How Prime Minister
Kevin Rudd
Can Help Australia
Avoid A Recession!

Submitted To The Prime Minister

PROJECT: RECESSION PROOF AUSTRALIA

Date: 13/02/2009

Hi Mr. Prime Minister, [Kevin Rudd]

Firstly, my partner and wife Valerie and I have been working in a humble home base since the early 1980's building a special system to help kids and families in Australia and around the world called wepinet.com -

<http://www.wepinet.com>

We have been quietly building our tools and technologies by funding our work through Valerie's work as a full commission sales person and through other online ventures for almost 30 years now.

Mr. Prime Minister, the current global economic turmoil while bleak for the rest of the world, offers a great opportunity for your new government to secure this unique time of crisis to lay the platform for a more powerful and more economically viable Australia that will thrive for generations to come, and you Kevin Rudd will be honored and studied not just in Australia, but all over the world for many centuries to come for your foresight, leadership and courage to take your country on a different path to what the economists were telling you to take.

Instead of the current path you are choosing to combat the recession around the corner, why not choose a more effective path for Australia that will position Australia in a far more stronger social and economic position after the recession.

Here are a few options to consider -

A RECESSION FREE MEDIA CAMPAIGN

1. Why not simply design a public media campaign telling Australians that their nation needs their help, and encourage them to boldly spend some money for their country ... but to do it wisely.

FAST FOOD COMPANY TO EMPLOY UNEMPLOYED

2. Pass a bill forcing all fast-food companies to only employ from the ranks of the unemployed, and make all those McKids who are still at school to only focus on their education and give their jobs to the unemployed. Why is it okay for a local restaurant or takeaway business to have to compete with say McDonald's when they have to employ adults and they don't have the economies of scale and the employment of school kids that a McDonald's has enjoyed for years.

HELP THE CAR INDUSTRY TO GO GREEN

3. Yes, help the local car industry, but force them to focus on cars that make environmental sense. If they don't get with the environmental program, they get no funding. If we continue to prop up incompetence than we are squandering the nation's critical resources.

DESALINATION PLANTS TO COMBAT WATER PROBLEM

4. It would only cost the nation about \$3 billion for a desalination plant, so build one, two or three plants for each state depending on each state's needs. This would create more jobs in the short term and the government can share the revenues from the plants with the states for generations to come. So this critical infrastructure investment will keep benefiting the Australian people in many ways. Once we solve the national water shortage issue once and for all, we can address other critical resource issues like energy security for domestic and transportation.

INVEST IN AUSTRALIA'S SCIENCE BASE

5. Give free education to those who want to enter the science and engineering fields so that we stem the brain drain. And lay the foundation for a more effective smarter country. You can introduce lifetime tax incentives for those who take those hard paths in science to make our country more productive and effective.

A CARBOHYDRATE TAX TO COMBAT OBESITY TO REDUCE EXPLODING NATION HEALTH BILL

6. Introduce a CARBOHYDRATE TAX on foods and services that serve the people of Australia unhealthy junk foods. This tax revenue will go towards funding a better health system and force these lazy unethical businesses to go back to their R&D people and make them develop better healthier products. And in time there will be no health issues and the nation's health bill will virtually vanish.

TEACH OUR KIDS TO BE MONEY WISE SO THAT THEY DO NOT ADD TO THE NATION'S UNEMPLOYMENT BILL

7. Install Robert Kiyosaki's great Cash-Flow board-game into every school and teach our kids how to become wealthy before they leave school so they have a more balanced education both academically and financially. You can negotiate a great deal from Mr. Kiyosaki I'm sure. And Australia will become the Wealthy and Wise Nation that all other nations can learn from.

ZERO-TOLERANCE CARBON EMISSION LIKE OTHER CONTRIES AROUND THE WORLD

8. Start introducing a Zero Tolerance Carbon Emission policy where all homes are forced to cut their carbon emissions to zero.

MY ENVIRO-SAFE INSTANTANEOUS MICROWAVE HOT WATER HEATER TO ELIMINATE MASSIVE WASTAGE FROM STARAGE WATER HEATERS

9. Get the CSIRO to fully develop my Enviro-Safe instantaneous hot water heating system and place them in every home so that we eliminate the costly storage hotwater heaters. And only heat the water when we need it, instead of heating water in big tanks that gets wasted if not used. This is a free gift to the people of Australia from wepinet.com -

<http://www.wepinet.com/a4-wekt-enviro-safe.htm>

USE MY CAREER MAXIMIZER TO HELP KIDS GET A JOB AND NOT ADD TO THE NATION'S UNEMPLOYMENT BILL

10. And license wepinet.com's Career Maximizer tool and give a copy to every household for their kids and parents so that they can better find new careers and jobs for themselves in the most effective way possible –

<http://www.wepinet.com/a4-wekt-dream-career-maximizer.htm>

USE MY WONDERFUL SINGLE HELIX TECHNOLOGY TO TECH KIDS HOW TO LOCK-IN THEIR SUCCESS IN LIFE

11. And you can license wepinet.com's wonderful Single Helix DNA tool and give it to every household so that all Australians will know how to become very powerful happy more resourceful people who are better positioned to help you to build a more happier and more prosperous nation.

<http://www.singlehelixdna.com/>

MAKE AUSTRALIA A CARING SOCIETY SO THAT WE CAN ELIMINATE THE NATION'S MASSIVE SECURITY BILL AND PROMOTE PEACE AROUND THE WORLD

12. Introduce a more caring society, and drastically reduce the nation's security costs by promoting peace and teaching all Australians how to be peaceful people, rather than the frightened nation spying on our next door neighbors that John Howard turned us into. This way we will be able to live our lives free of fear. And we will save billions on border security and the rest. And no other nation or people will want to hurt us or attack us like they do with the USA and Britain.

GEOTHERMAL ENERGY IS AUSTRALIA'S BEST ENERGY SECURITY

13. Why not introduce a special competition offering say \$100 million for the first Australian to develop a special drill capable of drilling through 4-10 kilometers of the earth's crust so that we can tap into Australia's vast GEOTHERMAL reserves and give Australia free safe energy to power industry, domestic and transportation forever. The economic advantages would be massive for Australia and the world. As you can see by the MIT report below Australia is best placed to tap into this vast free safe energy source. And all we will need is a new drill technology that can drill to such depths –

http://en.wikipedia.org/wiki/Geothermal_power

“If heat recovered by [ground source heat pumps](#) is included, the non-electric generating capacity of geothermal energy is estimated at more than 100 GW (gigawatts of thermal power) and is used commercially in over 70 countries. During 2005, contracts were placed for an additional 0.5 GW of capacity in the United States, while there were also plants under construction in 11 other countries.^[9]

Estimates of exploitable worldwide geothermal energy resources vary considerably. According to a 1999 study, it was thought that this might amount to between 65 and 138 GW of electrical generation capacity 'using enhanced technology'.^[10]

A 2006 report by [MIT](#), that took into account the use of [Enhanced Geothermal Systems](#) (EGS), concluded that it would be affordable to generate 100 GWe (gigawatts of electricity) or more by 2050 in the United States alone, for a maximum investment of 1 billion US dollars in research and development over 15 years.^[9]

The MIT report calculated the world's total EGS resources to be over 13,000 [ZJ](#). Of these, over 200 ZJ would be extractable, with the potential to increase this to over 2,000 ZJ with technology improvements - sufficient to provide all the world's present energy needs for several [millennia](#).^[9]

The key characteristic of an EGS (also called a Hot Dry Rock system), is that it reaches at least 10 km down into hard rock. At a typical site two holes would be bored and the deep rock between them fractured. Water would be pumped down one and steam would come up the other. The MIT report estimated that there was enough energy in hard rocks 10 km below the United States to supply all the world's current needs for 30,000 years.^[9] However, favourable locations for [EGS](#) (eg in [central Australia](#)) may require wells only 4 kilometres (2 mi) deep.^[citation needed]

Drilling at this depth is now possible in the petroleum industry, although it is an expensive process. For example, [Exxon](#) has announced an 11-kilometre (7 mi) hole at the Chayvo field, [Sakhalin](#).^[11] Wells drilled to depths greater than 4 kilometres (2 mi) generally incur drilling costs in the tens of millions of dollars.^[citation needed] The technological challenges are to drill wide bores at low

cost and to break rock over larger volumes. Apart from the energy used to make the bores, the process releases no greenhouse gases.

Other important countries considered high in potential for development are the [People's Republic of China](#), [Hungary](#), [Mexico](#), [Iceland](#), and [New Zealand](#). A number of potential sites are being developed or evaluated in [South Australia](#) that are several kilometres in depth" ... wikipedia.org

Mr. Prime Minister, I know you are wise, and you will see that the national economic models from all the economic experts are wrong because they erroneously focus on short term growth at the expense of a nation's long term prosperity.

Who cares if we have a poor growth rate in the short term, if we build the social and economic platform for enduring growth with better infrastructure then when the recession ends we will be better positioned to grow as fast as we want for as long as we want.

We will not have to ever face the costly effects of draught, because we will have plenty of water on which to live a more prosperous and productive life. Exploding Australia's prosperity and growth forever.

You see, we had a great banking system and economy and the world destroyed our poor Aussie Dollar when the American economy imploded recently. Economically Australia was one of the best nations with the strongest banking systems and economy, but it meant squat when the crunch came. The USA is rewarded with a stronger currency despite the USA destroying the global economy.

So why not take Australia down the most effective path and ignore all the experts who are telling us to spend. spend, spend and drive the nation into horrendous debt.

When we should be telling the nation to invest and save and to keep spending wisely to support our local small businesses.

Let the people of Australia spend wisely, not give them the money so that we can artificially prop up the nation.

I remember not so long ago the last labor government wasting many billions of dollars on submarines and other ill conceived military solutions and all we got for our billions was dud submarines.

Come on Mr. Rudd, you can do it.

Sincerely

Brian Elly
